Presentation Tool Guidelines and Expectations

Directions: To create a meaningful, creative presentation tool that will help the student present the information and help the audience to visualize and understand the information.

All Students Will Create:

_____ Keynote Presentation (similar to what Mr. White uses during class and current events)

Must have a “visual aid” that is an active part of the presentation. It should not replace you presenting (i.e. the entire presentation is a video, etc.). It should allow your audience to better understand your research and findings, highlighting the most important aspects of your new knowledge. It should also be a tool to help you in presenting your information.

Presentation Tools should be informative, interesting, creative, and not distracting.

Any images or internet sources used as part of the Presentation Tool should be cited appropriately. A separate Works Cited should accompany any Presentation Tool with its own Slide or Handout to be used under the Doc Cam.

All other research sources from the library and computer lab should be on a Bibliography page, typed, and attached to the Research Outline in MLA format.
